DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 21 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim does not recite that the program is claimed resident on a computer-readable medium and is therefore non-statutory.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 – 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chandler et al (US5935069) in view of Urbano et al (US5976088).

The former is directed to predictive determination of inter alia ECG trigger salients from the history of prior ECG waveforms for triggering on systole or diastole, see cols. 3 – 4 thereof. It would have been obvious in view of the latter Fig. 2 to use any well-known ECG-based epoch such as end-systolic or end diastolic chamber emptying or filling points for echocardiographic characterization of various pathologies such as ejection fractions or valve actions.

Art Unit: 3768

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chandler et al in view of Urbano et al as applied to claim 1 above, and further in view of Manning et al (US6501979)*, since whereas the former are non-specific as to program-based implementation, it would have been obvious in view of the latter Fig. 5 and col. 13 lines 45 – 55 and claim 20 to effect a program protocol to select predictive triggers based on the ECG.

Jackson (US6673017) and Gardner et al (US6210333) are cited as of interest in relating to cyclic triggering schemes.
